The Smart Matchmaker for Maharashtra's Logistics.

Eliminating empty miles through AI-driven container triangulation between JNPT and inland industrial hubs like Aurangabad and Pune.

The Empty Box Problem

- Trucks drive full import containers from JNPT to Aurangabad daily.
- Once unloaded, the truck drives the empty container all the way back to the port.
- This creates a "Deadhead" run: burning expensive fuel with 0% return revenue.
- Result: Massive carbon footprint and lost earning potential for transport fleets.

The Opportunity

₹0

Deadhead Earnings

Why drive empty?

Maharashtra has thousands of containers moving simultaneously. If an importer drops a box in Pune, an exporter nearby needs one to send back to JNPT. We connect them instantly to turn ₹0 deadhead trips into profitable return journeys.

Container Triangulation

1. Drop-off

An importer unloads their goods at an inland factory (e.g., in Waluj). The container is now empty and historically scheduled to return to port.

2. Smart Match

Our algorithm instantly finds a local exporter within a 50km radius who needs that exact box size and shipping line to send goods out.

3. Reload

The truck drives 10 minutes down the road, gets re-loaded by the exporter, and returns to JNPT full. Profitability is doubled.

The Technology Stack

Control Tower

A live 'Air Traffic Control' dashboard for operators tracking empty container supply and export demand across the JNPT corridor.

Matching Engine

Our Python-backed algorithm matches strict parameters: 20ft vs 40ft container sizes, shipping line compliance rules, and optimal geographical radii.

Driver App

Provides transporters with simple, real-time routing instructions: "Proceed to Factory X for a return load. Earn ₹8,000 extra today."

The Revenue Model

Transaction Fee

We charge a flat matchmaking fee (e.g., ₹500 to ₹1,500) per successful container triangulation. Exporters gladly pay this fee to secure immediate container availability without waiting days for a box to arrive from Mumbai.

SaaS Subscription

As the network grows, we offer a monthly recurring subscription model for large fleet operators, Custom House Agents (CHAs), and freight forwarders to access our predictive analytics and dedicated visibility dashboard.

Execution Plan

Q1: Hyper-Local

Target Custom House Agents (CHAs) in Aurangabad. They control the localized cargo volume.

Q2: Fleet Onboard

Partner with local transport associations to demonstrate immediate value via paid return trips.

Q3: Go Live

Deploy our full matching algorithm across the high-volume JNPT - Pune - Aurangabad triangle.

Ready to Triangulate?

Transforming the logistics ecosystem in Maharashtra.
